Subject: Gardner Intermodal- Addendum to earlier e-mail

11 Accurate data should be obtained on new intermodal on air quality and air toxics. This should be accomplished by mandating the installation of an air quality monitoring system by BNSF in at least in two locations to gather information before the start-up and during operations. The gathering and study should be done separately by an interdependent group reporting the data obtained to the state and federal agencies

12 .What provisions are being made to control noise? It is essential some type of baffle system be required.

13 Lighting will be conducted 24 hours a day, What provisions are being made to shade or control lighting. Special lighting should be considered.

14 Has the various Indian Services been contacted to survey for any relics that might be in the area.

Please acknowledge this e-mail

Please refer to my earlier e-mail –dated 8/9/09 @ 2:15 pm.

Item 5- Should read **Environmental Impact Assessment,etc.....**

15. It is noted in the report the year 2010 is used in the design. The increase in handling the containers will be 2.5 times amount in 2030. The report should be revised to reflect the future estimated containers to be handled
- 16 The report should indicate the numbers of workers (skilled & non-skilled) for both BNSF & warehouses for 2010 and 2030
